The Austrian manufacturer Life Optics has announced to introduce the world's first dental microscope at the IDS show in Cologne. The Varioscope M5dental can be used in fields like implantology, periodontology, endodontics, prothodontics and restorative dentistry and will come with the company's Varioscope MediaCenter documentation and recording system.

The headmounted Varioscope M5dental with integrated light and camera is supposed to give dentists complete freedom of movement. It will be fully adjustable and allows users to zoom to any desired magnification at their most comfortable working distance, the company says.

Life Optics from Vienna is a leading manufacturer of high-tech, headmounted vision systems. Their AF3 and M5 Varioscopes are the only headmounted operation microscopes worldwide and are used by surgeons and dentists working in all fields of surgery and dentistry in more than 70 countries.
